

30th October – UK Business Secretary announces Symetrica SmartScan

The UK Business Secretary Vince Cable announces funding for Symetrica's SmartScan (£954,741) as part of a wider series of investments addressing innovation challenges across UK industry. SmartScan delivers new 'detector' technologies allowing more affordable and sustainable analysis of nuclear waste materials, avoiding the use of He-3 produced predominantly as a by-product of US nuclear warhead maintenance. The project brings together Symetrica, an SME active in the Homeland Security Market, with Canberra UK, a leader in the Civil Nuclear Industry.

This grant from Innovate UK, the new name for the Technology Strategy Board, delivers further advances in both He-3 free neutron detector technology and de-convolution enhanced gamma ray spectroscopy on a range of spectrometers for the Civil Nuclear Market.

About Symetrica

Symetrica provides radiation detection solutions for Homeland Security and International Safeguards. Symetrica's continued success is founded on the creation of new capabilities in the detection, quantification and identification of nuclear materials.
